ANALYST NOTEHera local LLM

The EVO_GG1RSISNIP_v1335 strategy on PLMR yielded a negligible +0.43% ROI with a dismal Sharpe ratio of 0.14, indicating poor risk-adjusted returns. With only two trades executed, the win rate of 50% and maximum drawdown of 14.67% lack statistical significance and provide no reliable confidence for live deployment. The results suggest the strategy failed to capture meaningful alpha within the tested parameter space. A concrete next step is to backtest over a longer historical period or adjust entry filters to increase trade frequency and validate the signal logic.
