ANALYST NOTE

Hera local LLM

This EVO_GG1RSISNIP_v1448 strategy on AMZN failed, recording a -6.61% ROI and a negative Sharpe of -0.47. With only three trades executed, the 33.3% win rate and 17.84% drawdown lack statistical confidence and could reflect random noise rather than systemic flaws. The severe capital erosion suggests the entry logic is poorly calibrated to current volatility regimes. I will expand the out-of-sample dataset to validate if this underperformance is a one-off anomaly or a persistent strategy defect.
