ANALYST NOTE

Hera local LLM

The backtest on AAVE/USD shows a perfect win rate but relies on a single trade, rendering the 100% success rate statistically meaningless and the 0.47 Sharpe ratio unreliable. A maximum drawdown of 10.67% suggests significant volatility exposure that the current momentum logic failed to mitigate without a stop-loss. This isolated result cannot validate the TS-Momentum strategy's robustness against typical crypto market noise. We must run a longer backtest with expanded parameters to assess true risk-adjusted performance. The next step is to validate this alpha over a minimum of 100 trades before deployment.
