ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1540 strategy on LPG delivered a +41.35% return with a 66.7% win rate, yet the statistical confidence is negligible due to only three trades. While the 1.13 Sharpe ratio suggests reasonable risk-adjusted returns, the 21.82% maximum drawdown reveals significant volatility that a small sample size cannot reliably smooth. The strategy likely overfitted to recent noise rather than capturing a robust market regime, making these results more indicative of luck than skill. A prudent next step is to expand the lookback period or reduce trade frequency to gather sufficient data for a statistically valid evaluation.
