ANALYST NOTE

Hera local LLM

The GG5 Stochastic Oversold strategy on AVAX/USD failed catastrophically, losing 31.90% of capital with a -36.32% drawdown across only four trades. Such a tiny sample size yields zero statistical confidence, making the -1.70 Sharpe ratio and 25% win rate mere noise rather than valid performance metrics. The approach clearly identified no reliable entry points, likely because it misinterpreted minor pullbacks as oversold conditions in a downtrending market. We must expand the test window or discard the strategy entirely before allocating real capital to avoid compounding losses.
