ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1564 strategy generated a 46.62% ROI on SM, but the results are statistically insignificant with only two trades. While the 100% win rate and 1.32 Sharpe ratio appear impressive, a 32.83% maximum drawdown reveals high volatility and lack of robustness in the sample. This performance is likely an overfit to a specific market condition rather than a durable alpha. The next step is to extend the backtest to at least 500 trades across multiple market regimes to validate stability.
