ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v1788 strategy on LPG delivered a 41.35% return, yet the sample size of just three trades renders the 66.7% win rate statistically insignificant. While the Sharpe ratio of 1.13 suggests reasonable risk-adjusted performance, a maximum drawdown of 21.82% indicates substantial volatility that warrants caution before deployment. The lack of trade frequency prevents robust verification of signal stability across varying market conditions. The immediate next step is to expand the backtest window to accumulate at least 50 trades for a statistically valid assessment of consistency. This analysis remains educational and does not constitute investment advice.
