ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v1813 strategy on RDN failed completely, returning -5.59% with zero winning trades and a 14.78% drawdown. Such a small sample of three trades offers no statistical confidence; the results likely reflect noise rather than a systematic flaw. The negative Sharpe of -0.31 confirms the strategy destroyed capital during this test period. We must discard this parameter set immediately and avoid reallocating funds to it. Next, we need to backtest a modified entry filter on a longer historical dataset to validate any potential edge.
