ANALYST NOTE

Hera local LLM

The VOXR backtest for EVO_EVOEVOE_v2406 reveals a failing strategy with negative returns, a negative Sharpe ratio, and a dismal 33.3% win rate across only three trades. Such a sparse sample size renders the statistical results unreliable and prevents any confident generalization of performance. The significant 11.32% maximum drawdown indicates the entry logic likely targets false breakouts or low-liquidity regimes. You must significantly expand the parameter space or switch to a different timeframe to gather sufficient data for a valid signal.
