ANALYST NOTE

Hera local LLM

The AMZN backtest for EVO_EVOEVOEVOE_v2161 failed due to extreme volatility, yielding a -6.61% return with a negative Sharpe ratio of -0.47. Only three trades generated a mere 33.3% win rate, creating a statistically insignificant sample size that invalidates trend conclusions. The severe 17.84% drawdown suggests the entry logic lacks sufficient filtration for current market regimes. We must expand the test period or adjust parameters to capture a statistically robust sample before redeployment. Immediate action requires stress testing against broader market shocks to validate risk controls.
