ANALYST NOTE

Hera local LLM

The CPAY Bollinger Squeeze backtest shows a +27.63% ROI, yet the statistical significance is negligible given only two trades. A 50% win rate with such a small sample size offers no reliable edge, and the 18.47% drawdown highlights extreme volatility risk. The 1.03 Sharpe ratio indicates modest risk-adjusted returns that fail to account for the sparse trade frequency. We must expand the sample size through a longer historical period or adjust entry filters to confirm this strategy's viability before deployment.
