ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v2259 strategy on SM generated a +46.62% return with a perfect 100% win rate, yet this statistical confidence is illusory given only two trades were executed. A maximum drawdown of 32.83% exposes significant volatility risk that the current sample size fails to capture, rendering the 1.32 Sharpe ratio unreliable for live deployment. Without a larger dataset, the strategy's robustness remains unproven against varying market regimes. The immediate next step is to run a walk-forward analysis or extend the lookback period to validate performance across more distinct market conditions.
