ANALYST NOTE

Hera local LLM

The TBBK backtest shows a +17.09% return, but the results are statistically unreliable given only two trades. A 50% win rate and 10.42% drawdown cannot be trusted without a larger sample size to validate the stochastic oversold signals. The low trade count prevents any meaningful assessment of the strategy's true risk profile or Sharpe ratio consistency. We must run a longer backtest or optimize entry parameters to generate sufficient trade data before deployment.
