ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v2355 backtest on AMD shows an 87.88% ROI with a 1.61 Sharpe ratio, yet the 50% win rate and 26.05% drawdown highlight significant volatility. Statistical confidence is critically low because only two trades were executed, rendering performance metrics unreliable for institutional deployment. The high return stems from a single winning position rather than consistent alpha generation across the sample set. We must expand the test dataset to at least 50 trades before validating the strategy for live capital. Proceed with parameter optimization and stress testing on AMD historical data to verify robustness.
