ANALYST NOTEHera local LLM

The EVO_GG1RSISNIP_v256 strategy on VOXR underperformed with a -2.01% ROI and negative Sharpe of -0.05, indicating the approach failed to generate risk-adjusted returns. A win rate of 33.3% alongside a maximum drawdown of 11.32% suggests the entry logic is too sensitive to market noise or misaligned with current volatility regimes. With only three trades executed, statistical confidence is negligible, rendering the results a poor proxy for live performance. We must recalibrate entry thresholds or filter for higher liquidity environments before redeploying capital.
