ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v268 strategy on VOXR failed to preserve capital, posting a -2.01% ROI with only three trades executed. A win rate of 33.3% and a negative Sharpe ratio of -0.05 indicate the approach lacked statistical significance and failed to capture trend momentum. The maximum drawdown of 11.32% exposes substantial risk per trade, suggesting the entry logic requires stricter filtering against volatility spikes. Given the extremely low sample size, these metrics reflect noise rather than a systemic flaw, though the negative expectancy is concerning. The immediate next step is to backtest the strategy on a longer historical dataset to determine if poor performance is specific to this recent market regime.
