ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v296 strategy generated a nominal 41.35% ROI for LPG, yet the sample size of only three trades renders this performance statistically insignificant. Despite a respectable 1.13 Sharpe ratio and 66.7% win rate, the 21.82% maximum drawdown highlights substantial volatility risk inherent in such sparse data. One high-impact trade likely skewed these metrics, preventing a robust assessment of the strategy's true risk-adjusted returns. You must expand the historical window or adjust parameters to generate a statistically valid dataset before deploying capital. Further backtesting is required to validate the robustness of these signals against different market regimes.
