ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v3 strategy on VOXR failed, delivering a negative ROI and a Sharpe ratio below zero across only three trades. With such a limited sample size, the 33.3% win rate is statistically insignificant and likely reflects random noise rather than a robust edge. The 11.32% maximum drawdown indicates a severe lack of risk control during this short period. Given the lack of statistical confidence, this strategy requires either parameter optimization or immediate retirement before further capital is deployed.
