ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v273 strategy on RDN failed catastrophically, registering a zero win rate and a negative Sharpe ratio across only three trades. With such a negligible sample size, the statistical noise completely obscures any potential signal, rendering the -5.59% drawdown meaningless as a measure of systemic risk. The capital eroded to \$9,440.84 suggests the entry logic is misaligned with current volatility regimes. We must discard this parameter set immediately and run a robust walk-forward analysis to validate signal stability before live deployment.
