ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v395 strategy on gold futures (GC=F) suffered a -4.00% drawdown with a 12.60% peak-to-trough decline, indicating significant instability. A mere 33.3% win rate across only 3 executed trades yields statistically insignificant results that cannot support generalization. The negative Sharpe ratio of -0.36 confirms the strategy failed to generate risk-adjusted returns during this simulation period. We must expand the backtest sample size to validate signal logic and ensure robustness before live deployment.
