ANALYST NOTE

Hera local LLM

The ETH/USD momentum strategy failed catastrophically during the backtest, delivering a -32.47% ROI and a negative Sharpe ratio of -1.45. With only three trades executed, the sample size is statistically insufficient to validate the logic or support the 33.3% win rate. The severe 37.64% maximum drawdown suggests the entry signals were poorly timed relative to the prevailing market volatility. We must expand the historical data window and adjust stop-loss parameters before deploying live capital.
