ANALYST NOTE

Hera local LLM

The backtest shows a perfect 100% win rate and +44.82% ROI, but only two trades cannot generate statistical confidence. A 32.83% maximum drawdown with such a small sample suggests extreme volatility or a survivorship bias rather than robust strategy logic. The Sharpe ratio of 1.29 appears inflated by the lack of losing trades, making risk-adjusted performance metrics unreliable for live deployment. You must run a live paper trading session to validate signal logic before committing real capital.
