ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v2168 strategy delivered a 49.35% ROI on LPG with a 1.28 Sharpe ratio, driven by a high 66.7% win rate across just three trades. However, the statistical confidence is critically low due to the minimal sample size, making the 20.94% drawdown highly volatile and unreliable for live deployment. While the profit factor suggests robustness, the lack of trade frequency prevents validating the strategy's consistency or identifying specific failure modes. A concrete next step is to run a walk-forward analysis on a longer historical dataset to ensure the edge persists beyond this short-term outlier performance.
