ANALYST NOTE

Hera local LLM

The LPG backtest for EVO_GG1RSISNIP_v243 shows a 49.35% return driven by just three trades, which severely limits statistical confidence and increases the risk of curve fitting. While the 1.28 Sharpe ratio suggests a decent risk-adjusted profile, the 20.94% maximum drawdown indicates significant exposure during adverse market moves. The low trade count fails to validate robustness, making the 66.7% win rate statistically insignificant for institutional deployment. Re-running the strategy with expanded parameters or a longer lookback period is essential to verify if these results hold under varied market conditions.
