ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v288 strategy on LPG generated a +46.76% ROI with a 66.7% win rate, yet the sample size of only three trades renders the 1.23 Sharpe ratio statistically insignificant. While the 20.33% maximum drawdown remains contained, such low frequency prevents robust validation of the signal logic under varying market regimes. Confidence in these results is currently low due to the extreme lack of data points required for meaningful risk assessment. The immediate next step is to run a longer historical backtest to evaluate performance consistency across different volatility regimes before any live deployment.
