ANALYST NOTE

Hera local LLM

The EVO_EVOWEBIDEA_v370 strategy generated a 46.76% return with a 66.7% win rate, yet the statistical significance is negligible due to only three trades. A maximum drawdown of 20.33% indicates substantial volatility risk that the limited sample size fails to adequately capture. While the 1.23 Sharpe ratio suggests acceptable risk-adjusted returns, the small trade count renders any performance projection highly speculative. You must increase the simulation period or adjust parameters to gather sufficient data points before deploying live capital.
