-2.01%	-0.05	33.3%	-11.32%

EQUITY CURVE202 sessions · starting at \$9997.00

ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v287 backtest on VOXR reveals a statistically insignificant failure due to only three executed trades, rendering the -2.01% loss and poor -0.05 Sharpe ratio unreliable indicators of strategy viability. The 11.32% maximum drawdown suggests high volatility exposure, yet the tiny sample size prevents any meaningful assessment of risk-adjusted performance or entry precision. Without additional historical data points, we cannot confidently attribute the negative outcome to a structural flaw rather than mere sampling noise. The immediate next step is to expand the lookback period or adjust parameters to generate a larger trade sample before drawing definitive conclusions on viability.
