ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v277 strategy on RDN failed completely, generating zero wins and a negative Sharpe ratio of -0.31 across only three trades. A 14.78% maximum drawdown with a -5.59% return indicates severe structural flaws rather than temporary market noise, given the tiny sample size offers zero statistical confidence. The bot likely misidentified volatility regimes or failed to filter low-volume periods, resulting in premature exits that eroded capital. Immediate action requires recalibrating entry thresholds and implementing a stricter volume filter before re-evaluating performance on fresh data.
