ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v431 strategy generated a 46.76% ROI on LPG with a respectable 1.23 Sharpe ratio, yet the strategy's statistical validity is critically compromised by only three total trades. A 20.33% maximum drawdown combined with such a low trade count suggests the results are highly susceptible to overfitting and lack the necessary sample size for institutional confidence. While the win rate of 66.7% is promising, it is meaningless without robustness against regime changes, making this performance potentially an outlier rather than a repeatable edge. The next step is to expand the backtest horizon significantly or adjust entry thresholds to force more trade execution and verify stability across different market conditions.
