ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v348 backtest on MSFT shows a 19.68% ROI, yet the strategy is statistically unreliable due to only two executed trades. A 50% win rate and 14.24% maximum drawdown with such a minimal sample size indicate high volatility and overfitting risk rather than robust alpha.
While the Sharpe ratio of 1.03 suggests decent risk-adjusted returns, the lack of trade frequency prevents meaningful confidence intervals. We must run a longer backtest with different parameters or validate on out-of-sample data before deploying live capital.
